

The ovenbird

The scientific name of the ovenbird is: *Furnarius Rufus*.

Animal

Predator

These are some of the foods that the ovenbird occasionally eats.

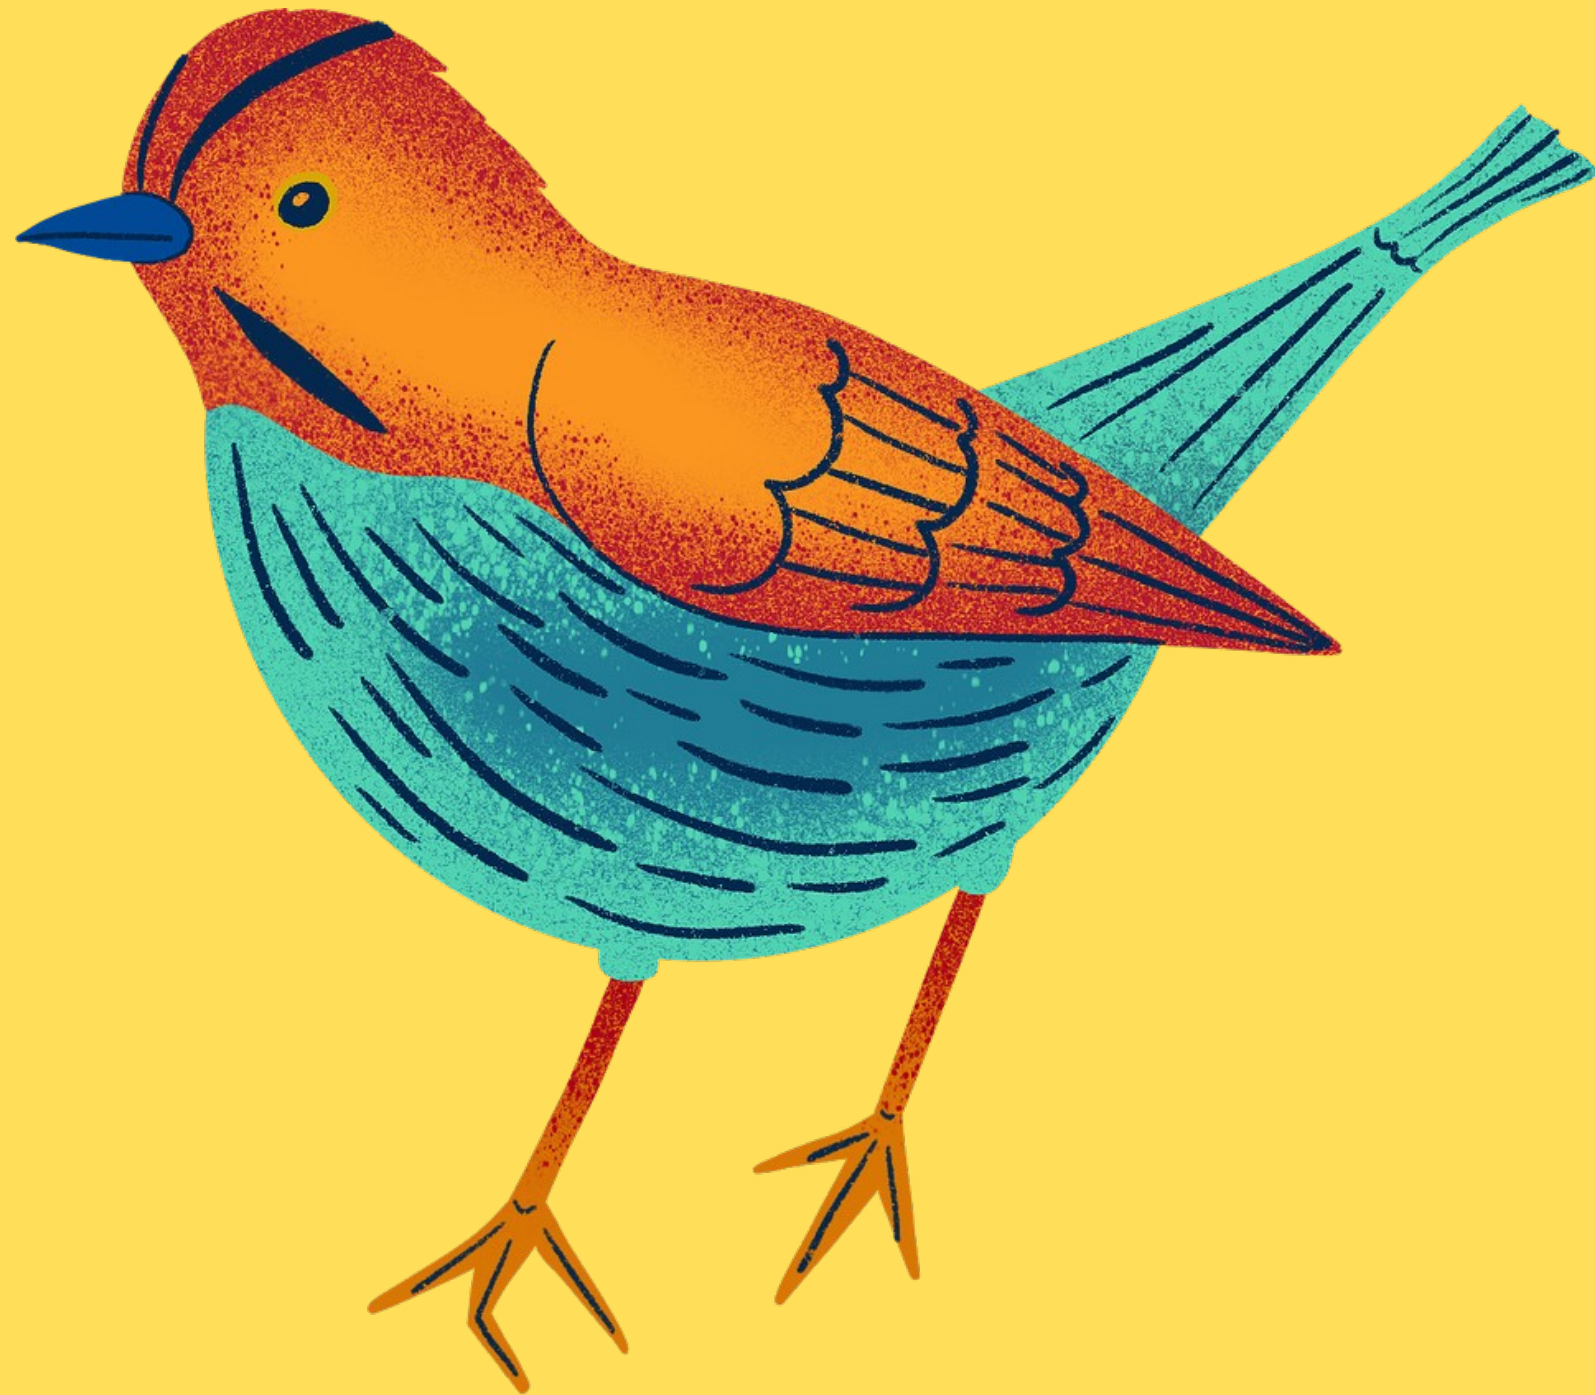

Fruits

Bread

The ovenbird, like the puma, is native to Argentina. Specifically, it is a very beautiful bird because of its rust-brown plumage.

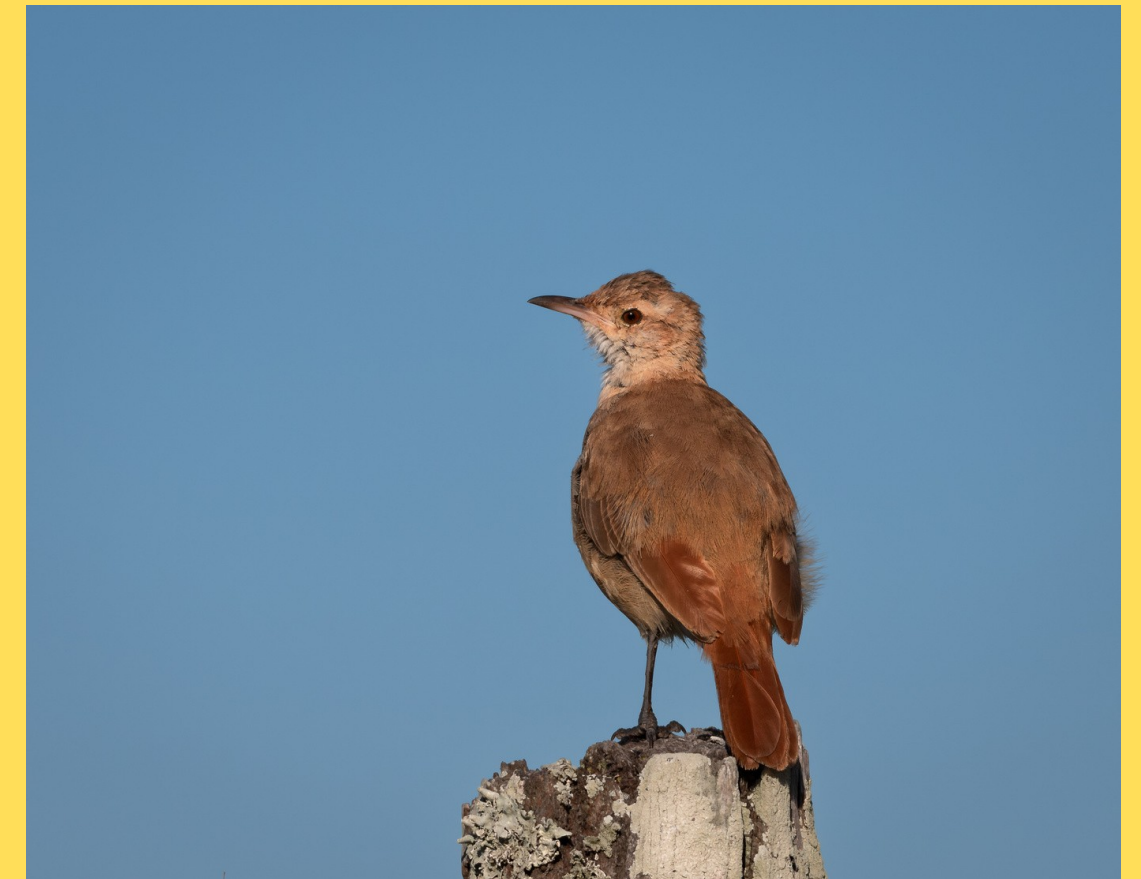

Behavior

The ovenbird's behavior is territorial and calm. It also sings duets with its mate.

Gestation

The gestation period for the ovenbird lasts between 14 and 18 days. During this time, the eggs are incubated by both parents.
